

Loading software files that have been zipped onto a USB drive.

NOTE: This software should ONLY be loaded to a USB drive through a PC or laptop.

1. Download the zip file from the website. Note where the file is downloaded to on the computer.

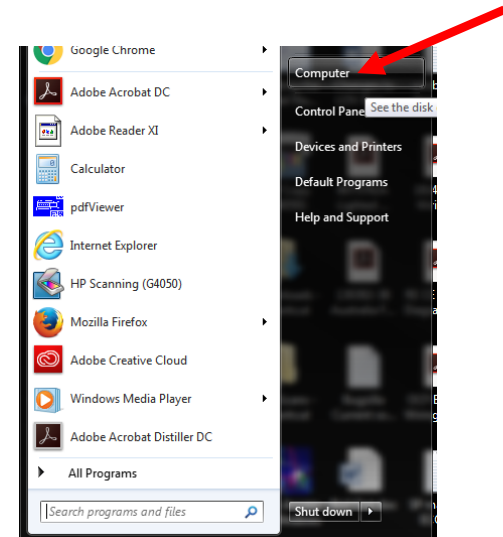

2. Open the folder with the zipped software file or download it from the website (see Figure 1).
3. Click on the attached file and drag it onto the desktop of the computer (see Figure 2).

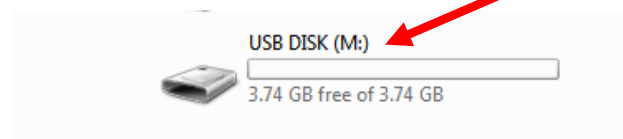

4. Double click and open the zipped folder (see Figure 3).

5. Insert a blank USB drive into the computer. Ensure it is formatted for FAT 32. If using an old drive, delete the files **FIRST**.
6. Open the USB drive directory by clicking on start button in the lower left corner of the screen (see Figure 4).

7. Click on Computer (see Figure 5).

8. Locate the blank USB drive in the directory (see Figure 6).

9. Double click on the USB drive to view the blank directory (see Figure 7).

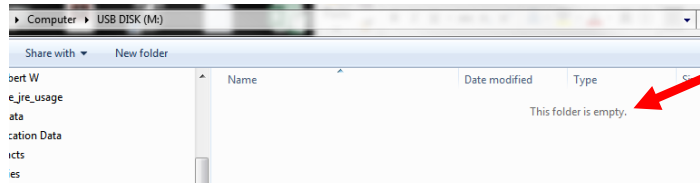

Figure 7

10. Click on the file in the zip folder to highlight the file (see Figure 8).

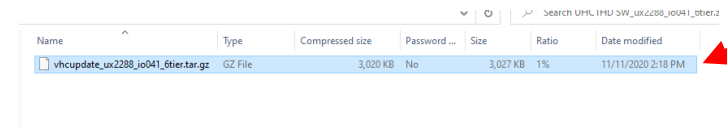

Figure 8

11. With the file highlighted, click and drag the file into the blank USB directory. The file will appear in the USB directory (see Figure 9).

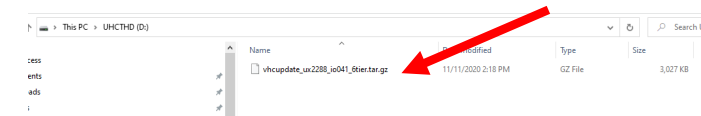

Figure 9

12. Remove the USB drive and follow the software update instructions to load the software.

13. If you have any questions, do not understand any of the steps, or have other issues call 1-800-551-8633.

14. **Ensure the USB drive is marked with the software version.**
